There are still “barn finds” out there! I bought this in 2009 from an elderly lady that was an Army nurse who spent her career in Germany. She bought the car in Germany and had it shipped to Ertley. They swapped out the European headlights and installed the US 5 MPH bumpers.

It had 30,000 miles on it when I bought it in November 2009. That is less than 900 miles per year. I was at a car show one time and her mechanic approached me and said that he recognized the car. Each year when he inspected it he was amazed at how little she drove it.

Because the previous owner spent her career in the Army, she chose the factory original “citrus green metallic” (lime green) paint code 874. The color is very rare. The only other time that I have seen a 1976 with this color is in a Benny Hill skit.

Any car fan can tell you what Maseratis are about: mixing race-bred speed with classy Italian styling that no other company can match.

The brand traces its roots to the five Maserati brothers who were pioneers of European car engineering in the early 20th century. They were experts at extracting the most speed from race cars, and after honing their skills for other companies, they went independent under their own name in 1926.

One of their first race cars won the famous Targa Florio that same year, setting the stage for countless wins in sports car and grand prix racing in the decades to come.

By the late 1950s, the company turned its attention more fully to road cars. It used many of the same innovations that brought the company so much success on the race track and incorporated them into beautiful, stunningly styled street-legal cars.

Some of the world’s most iconic performance vehicles were built by Maserati in the 1960s and ‘70s, including the mid-engined Bora, with its futuristic, eye-catching body.

Today, Maserati continues to build on its foundations of speed and style. Its cars are more luxurious than ever, and they retain an air of exclusivity and taste that few vehicles can match.

As new Maserati vehicles are rolled out, this is a brand to watch as it blends its heritage with a forward-looking vision.

For nearly a century, Chevrolet has stood for value and style that everyone can afford. From its start as a brand to compete with Ford’s Model T to today’s high-tech family cars, Chevy has always been about bringing quality to the masses.

Now, more than ever before, it’s also a brand in transition. Chevy is entering a new era where car buyers and the government are demanding more efficiency across the board, which means an increasing emphasis on smaller cars that sip very little fuel. The recently redesigned Chevy Volt — an electric car — is even designed so that it only uses gasoline for long, extended trips.

To drive home the point on efficiency, Chevrolet introduced a lineup of efficient crossover vehicles, some of which get more than 30 mpg on the highway. That’s an astounding figure for a mid-size SUV, setting the bar for crossover vehicles around the world.

At the same time, Chevy is holding onto its heritage as a maker of muscle cars and powerful, tough pickup trucks. The Camaro hearkens back to Detroit’s glory days in the 1960s, and huge, rugged vehicles like the Silverado pickup and full-size Suburban SUV still set the standard for American workhorses.

From its smallest commuter cars to its biggest, most luxurious SUVs, there’s a century of hard-working, blue-collar strength behind every vehicle.

### AT A GLANCE

**TECHNOLOGY:** OnStar offers safety, convenience and information; the electric Volt is already revolutionizing the auto industry.

**HISTORY:** Started by race-car driver Louis Chevrolet and General Motors founder William Durant in 1911. Purchased by GM in 1918.

**FAMOUS MODELS:** Camaro, Corvette, Silverado, Suburban.

**KNOWN FOR:** Affordable family cars, V8-powered performance vehicles, and tough work trucks.

---

**Chevrolet: Affordable, Powerful Style**

From the very start, Lexus has been a force to be reckoned with in the luxury vehicle market. Since being introduced by Toyota in 1989, the goal of this brand has been to bring exquisite craftsmanship and unrivaled performance to United States consumers. Consider that Lexus sold its 1 millionth vehicle in 1999 — just in time for its 10th anniversary — it is safe to say that it got off to a phenomenal start.

Since then, Lexus has consistently produced solid, reliable cars that routinely earn top marks for design and quality. Silent cabins and powerful engines are hallmarks of the Lexus brand and can be expected regardless of model. Initially devoted to producing luxury sedans — the ES 250 and the LS 400 were its inaugural models — Lexus has expanded over the last two decades to include a line of luxury performance sedans like the GS, SUVs like the LX and even several hybrid-powered cars like the RX and LS 600h in recent years. Lexus’ styling has taken a new, much more aggressive turn in recent years, going from one of the automotive world’s most conservative brands to one of its more forward-looking. The NX and RX crossovers both turn heads with sharp styling, and the latest generation of the full-size LS flagship also looks more sleek and coupe-like than ever before.

AT A GLANCE

TECHNOLOGY: Porsche has always been at the forefront of automotive technology. Most recently it has led in direct-shift gearboxes.

HISTORY: Porsche was started by Ferdinand Porsche in 1931 in Maffersdorf, Austria-Hungary.

FAMOUS MODELS: 911 Carrera, Cayenne, Boxster, Cayman.

KNOWN FOR: Speed, performance, luxury and maneuverability.

Porsche: Limitless German Speed

Since the Porsche 356 first attained road certification in June of 1948, this brand name has been associated with vehicles of premium performance and legendary luxury. Classic models like the 911 Turbo have captivated fans of sports cars for decades. While Porsche has always been known for its top racers, the company has entered the sedan market with the Porsche Panamera. This high performance luxury vehicle serves double duty as a daily driver and a speed demon that can hold its own on the autobahns. It also gives a nod to practicality with the Cayenne, one of the highest performance SUVs ever sold. Its sparkling handling and finely honed, powerful lineup of engines makes it a true Porsche that just happens to be family-friendly.

In addition, Porsche is at the forefront of electric car technology. As an engineering giant, this company continues to push the limits of performance while also seeking advanced hybrid drivetrains and other ways to produce power and speed without doing too much harm to the environment. Porsche always produces cars at the pinnacle of automotive capability, and today’s lineup is no exception. It builds on a long history of exceptional German engineering and subtly evolved styling.

It’s a wonderful combination of heritage and technology.

1994 Ford Mustang GT 5.0
Don and Matthew McDermott, Exeter
This pony only has 27,000 miles. Modifications have been made to enhance the performance and horsepower to 350. A set of BBK high performance headers, Flow-Master exhaust, cold air intake and a throttle body. This 5 speed is the perfect car for a nice Sunday drive.

AT A GLANCE

TECHNOLOGY: Lexus has led the way in key, up-and-coming innovations like pedestrian detection, driver facial recognition monitoring and lane keep assistance.

HISTORY: Since being launched in the U.S. as the luxury branch of Toyota in 1989, Lexus has enjoyed an impeccable reputation.

FAMOUS MODELS: LS, IS and HS sedans and the GX and RX SUVs.

KNOWN FOR: Reliable luxury cars that bring technology, comfort and elegance to the table.

Lexus: World-class Luxury

With an all-new design for 2018, the LS gets a radical new design with a coupe-like silhouette, yet spaciousness of prestige sedan.

The Lexus NX 300, formerly known as the NX 200t, remains one of the sharpest luxury-utility vehicle designs on the road.

The Enform Safety Connect and Enform Service Connect are now complimentary for the first 10 years of ownership on the RX.

From a Turkey to a “T”

Photos and story submitted by Bob Berkey, Shavertown.

This story begins at Thanksgiving, 1973. I was dating Cathy (my future wife) at this time. Her mother, Mary Lou, wanted to start cooking the turkey early Thanksgiving morn- ing and had set her alarm clock for 4AM and when it woke her, she went down to the kitchen. Murphy’s law was proven again! The oven was dead! So the turkey was then taken to Lambert Swingle, her brother-in-law, for repair. When I arrived at my Cathy’s house, she explained the problem and asked if we could go to Uncle Lambert’s to get the turkey. When we got to his house, we entered through the garage and parked there was a 1923 Ford Model T Depot Hack. I said, “Wow, this is beautiful! What do I have to do to get a ride?” Cathy very calmly replied, “marry me!” The car was primarily used for family weddings now. About 3½ years later, July 9, 1977, I finally got my ride!

Here’s a brief history of the car. Originally, it belonged to Mr. Fred Howell of Wilkes-Barre, PA. In 1924, it was sold to Robert and John Thomas, also of Wilkes-Barre. The third owner was Sordoni Construction of Forty Barre, PA. (Lambert’s employer) and that’s when it was titled as an antique with a permanent registration. It was also at this time the car was restored. I don’t know the year that Sordoni purchased it. He also owned other antique automobiles but when there was a parade and he wanted his construction company recognized, Lambert always drove the Depot Hack as it was his personal favor- ite. Lambert retired in 1973 after working 50 years as the chief mechanic for the Construc- tion Company. He started his career in 1923 and now 50 years later, he was given this car as a “retirement gift”. Much better than a “retirement gift”. Much better than a

distillation. The kids all remembered Uncle Lambert as the chief mechanic. Lambert was extremely knowledgeable about cars. He did a masterful job! The engine was rebuilt. He installed aluminum pistons (.030 over), stainless steel valves and seats. He did a masterful job!

In 2007, the magneto exploded! Oil and magnet pieces were all over the road. We were wearing shorts and got oil splattered from the kness down. We were fortunate enough to have a friendly neighbor who came to our rescue and got us home. Furthermore, we were even more fortunate to locate a gentleman by the name of Proteus Phillips of Goldsboro, PA, a very knowledgeable Model T restorer, who was willing to take on the task of the magneto. He installed aluminum pistons (.030 over), stainless steel valves and seats. He did a masterful job!

Little did I know way back in November, 1973 that I would be entrusted with the care and maintenance of this beautiful, eye catch- ing piece of automotive history. By the way, Cathy and I affectionately call the car “Unc.”

Lincoln: History of Luxury Excellence

Lincoln was founded in 1917 by former General Motors executive, Henry Leland, to build aircraft engines for WW II military airplanes. After the war it was converted to luxury automobile manufacture. Henry Ford purchased the struggling com- pany in 1922 to be the luxury car division of Ford Motor Company. Lincoln competed successfully with the likes of Pierce Arrow, Packard, Cadillac, and other luxury brands with well-made touring cars like their 1929 model.

In 1936 a 4.4 liter V-12 engine was devel- oped and installed in an attractive, flowing design coupé and sedan called “Zephyr.” This model was so successful that it became a separate brand name under the Lincoln ban- ner. The Town Car name first appeared in 1922 on huge, limousine style vehicles. It appeared again 1959 as a trim package on Lincoln sedans. In 1981 Town Car became a separate

Lincoln’s flagship sedan, the Continental has earned the highest award from the Insurance Institute for Highway Safety.

Lincoln also has introduced the 2018 Navigator, an all-new full-size SUV that combines modern luxury with advanced technology. Navigator

Lincoln has introduced the 1981 Navigator, an all-new full-size SUV that combines modern luxury with advanced technology.

Latin for “I Roll,” Volvo has always been associated with diligent craftsmanship and sustainability. If you're driving a Volvo, it's difficult not to feel safe.

Severe Swedish weather prompted the company to engineer cars that would remain impenetrable to the cold. This weather restriction inadvertently started a legacy of solid durability and design.

Volvo's recent moves toward using electric batteries to power certain models is extremely exciting for both the company and the larger electric battery movement. Although smaller outfits have created pure electric vehicles, and other companies have launched successful hybrid lines, no company with the stature, class and refined engineering sense of Volvo has seriously pursued creating a mass-market electric vehicle. Unlike other electric vehicles, Volvo aims to preserve its trademark sensible-yet-roomy luxury in an electrically powered form.

In December of 2009, Zhejiang Geely Holding Group, a Chinese company, reached an agreement to purchase Volvo from Ford. This expansion of Volvo into the Asian market increases the potential major impact that its fleet of vehicles could have on the world at large.

It's safe to say that, no matter who owns Volvo, this brand will still leave its drivers with a feeling of safety for a long time to come.

For decades, Cadillac, along with Chevrolet and Buick, has been one of GM’s core brands. Cadillac is the brand that says “luxury” like no other American-made car.

Despite a long and storied history, and despite being indelibly etched into the American imagination, Cadillac had lost some of its luster by the 1990s. After a dramatic reinvention, including the introduction of the exciting CTS sports sedan and popular Escalade luxury SUV, this American brand once again competes with the world’s best.

In 2018, Cadillac continues its focus on breaking luxury boundaries. The brand is moving upmarket, competing more directly with high-end cars from BMW and Mercedes-Benz by introducing the all-new CT6 at the top of its range. And it continues to focus on powerful, performance-oriented, muscular luxury vehicles like the CTS-V and ATS-V.

In short, the name “Cadillac” has conveyed luxury and style in a distinctly American way for decades. As GM rebounds, the Cadillac legacy will not just survive; rather, it will continue to set the trend for both American and foreign automakers looking to design classy luxury vehicles that would make anybody proud to own one.

It is, as the saying goes, becoming the Cadillac of automobiles once again.

**Technology:** Intelligent cruise control and blind zone alerts make it easier to stay safe; CUE digital interface is cutting-edge.

**History:** The Cadillac Automobile Company was born in 1902 and quickly gained a reputation as making the world’s most luxurious vehicles.

**Famous Models:** Seville, Escalade, Eldorado.

**Known for:** The American luxury car answer to Germany’s Mercedes-Benz and England’s Jaguar.

**Cadillac: True American Luxury**

The all-new XT5 combines spacious luxury and high-tech convenience features for an upscale experience.

For 2018, the XTS receives technical, chassis and appearance changes to heighten the appeal of this elegant sedan.

The ultimate luxury SUV raises the bar further with a new 10-speed automatic and bold new interior color choices.
BMW isn’t afraid to try new things. As a company with decades of experience engineering some of the finest automotive machines on the planet, BMW has made its reputation with its meticulous, highly functional design, but also has remained relevant by refusing to simply settle into a groove.

Aside from designing a new test electric vehicle, BMW also is exploring the opposite end of the sustainability spectrum with a rugged, no-doors, no-roof, no-extra-padding outdoor vehicle that makes you wonder if you’re in a car at all.

The overwhelming success of the Z4 Roadster, with its incredibly sleek body and smooth handling, has kept BMW exactly where it needs to be — pushing the design envelope without sacrificing either precision or style. Consider the classic, an intelligent vehicle that functions as a family car but also has the exhilarating driving dynamics of a top-notch sports sedan.

Because BMW manufactures a vehicle for every type of lifestyle and refuses to stop innovating on a variety of fronts, the company is poised to continue achieving magnificence in the years to come.

For 2018, BMW’s continued focus on “efficient dynamics” and the evolution of its aggressive styling make the brand as compelling as ever.

It’s another reason this German brand has spent decades as a leader in the auto industry.

The quintessential high-performance sedan enters its sixth generation as the most high-tech M-vehicle to date.

X3
The vehicle that launched the premium compact crossover segment gets an all-new design and a new M Performance model.
2017 marks the Corvette Club of North-eastern Pennsylvania’s 50th anniversary. The Club, formed in 1967 by several Corvette enthusiasts, has grown in size over the years from single-digit numbers to over 100 members presently. On August 13, 2017 the Club held an anniversary/reunion party for former and present members which included reacquainting members who had not seen each other in years and reminiscing about past events with a photo table depicting pictures back to 1967. Charts listing board members and officers throughout the years proved interesting to those in attendance bringing back many past memories. A plentiful buffet of food, live music and a basket raffle rounded out the day. The Club holds many events throughout the year: road rallies/joker fun runs, game nights, rides to points of interest and enjoying a meal with those attending, weekend away trips caravanning to various locations and even attending other NCCC club events. Yearly, a membership appreciation dinner is held when activities slow down and most cars are stored away for the winter months. Throughout the year various charitable functions occur: donating to libraries, food kitchens, Toys for Tots, animal shelters, etc. The Club has proven to be a way of enjoying fun activities and forming new and lasting friendships.

Mercedes-Benz has remained at the forefront of quality and reliability in the market of luxury automobiles. The company has maintained steady innovation in driving comfort throughout the 20th century, and its engineering is peerless. Mercedes-Benz automobiles are of legendary durability.

The Mercedes-Benz GL looks to be a true sales leader for large luxury SUVs. This model is back with brilliant options, making this comfortable and durable car a better value.

The E-Class models are equipped with a variety of safety features. Attention assist technology helps motorists stay awake on the road. Automatic emergency braking, lane tracking, and speed limit programs are included in a package of the latest intelligent technologies that put driver safety first. The Mercedes-Benz also has been recently redesigned with a long list of world-first technologies designed to make the driving experience more comfortable and safe.

Mercedes also offers a full line of practical, family-friendly SUVs, ranging from the nimble GLC to the traditional ML.

With new innovations in safety, energy efficiency and comfort, the Mercedes-Benz brand is poised to thrive in a market that craves more value for the money. Its cars have long been the most cutting-edge the world has ever seen.

**Mercedes-Benz: Sophisticated Engineering**

**TECHNOLOGY:** The new BlueEFFICIENCY technology harnesses detailed user profiles to enhance energy efficiency based on the habits of Mercedes-Benz drivers.

**HISTORY:** Karl Benz invented the first petrol-fueled motorcycle in 1886. A Mercedes vehicle was marketed for sale in 1901. In 1926, the company began mass producing cars.

**FAMOUS MODELS:** C-Class, E-Class, S-Class, CL-Class, G-Class

**KNOWN FOR:** Luxury, dependability, performance.

**AT A GLANCE**

**S-Class**

The thoroughly revised S-Class adds new models and next-generation driver assistance tech for 2018.

**E-Class**
